   * APPENDIX V: Evaluation form for the Master defense
1. GOAL OF THE MASTER PROJECT

The Master project is the culmination of a student's work of study, analysis, design and implementation, which proves his/her engineering capacities.

In the context of a Master Project, the student works on a problem defined by the head of the laboratory where the project will be carried out: the laboratory may be at EPFL, at another university where the student is doing an exchange program, or in a company. The head of the laboratory must ensure that the student can carry out the necessary analysis and design work that will subsequently allow the EPFL advising professor to evaluate the engineering capacities of the student.

The results of the Master project are presented as a written report (thesis) and an oral presentation that is part of a viva-voce examination; both the thesis and the examination are graded.

The Master project is officially done during the 4th semester of the Master. The Master project can be done in the following settings:

1. in the lab of a professor from the SV School, or another EPFL School
2. in another approved university (NB requires a co-advisor professor in the SV School)
3. in a company (NB requires a co-advisor professor in the SV School)

The EPFL (co-)advising professor must approve the topic of the Master project. The student is responsible for obtaining this approval and for registering the project with the section.

2. SUPERVISION OF THE PROJECT

A teacher (PO, PA, PATT, scientist*) at EPFL School of Life Sciences is responsible for supervising the Master project. Students must select a Master project within the deadlines fixed by the SSV section. During the master project, the supervising professor is responsible for monitoring and evaluating the project’ progress. For those students doing a minor in biomedical engineering or another specialization, the director of the Life Sciences Section may confer this responsibility upon a professor in another EPFL Section, if requested by the student.

When the project is done outside EPFL, the head of the host laboratory is responsible for monitoring the progress of the student. This laboratory host will also be the main contact for the SV professor, who remains the official academic advisor for the Master project.

* Cf. "Ordonnance sur le contrôle des études menant au bachelor et au master à l’EPFL, chapitre 4, art.32.

3. REGISTRATION

Formal registration for the Master project in IS-ACADEMIA is the responsibility of the student, who must respect the deadlines specified in the academic calendar and, of course, on the condition that they have already obtained the required 90 master credits. The choice of the project is made in agreement with a SV professor or a professor from another EPFL section, in accordance with the advising conditions outlined above.

According to the “Ordonnance RS 414.132.3 sur la formation menant au bachelor et au master à l’EPFL », section 4 art. 12, studies cannot be interrupted between the master cycle and the master project. Which means that the student has to begin the master project immediately after obtaining the 90 credits of the master cycle.

4. LENGTH OF PROJECT

For the two Master programs, the master project has officially the following duration:

Within EPFL: 4 months (17 weeks); in-house master project must be submitted on January 19th, 2018 or June 22nd, 2018, for projects performed in the Fall and Spring semesters, respectively.

In companies or exchange University during a mobility program (17 or 25 weeks): must be submitted on March 16th, 2018 or August 17th, 2018 for projects performed in the Fall and Spring semesters, respectively.
5. STATUS OF STUDENTS ON ACADEMIC OR INDUSTRIAL EXCHANGE

Even though they remain registered as EPFL students, when students do their master projects while on an academic or industrial exchange, they are subject to the rules of the host institution or company with respect to matters such as work schedule, holidays, confidentiality, salary, etc. The contractual link between the student and the host institution or company does not bind EPFL to the entity in question. Nonetheless, the student remains subject to the registration deadlines and thesis submission deadlines specified in EPFL’s academic calendar.

6. EVALUATION DURING THE PROJECT

It is important for the EPFL advising professor to follow the project’s and student’s progress. In the case of exchange students, in agreement with the hosting laboratory in the university or company, the advising EPFL professor must ensure that the project fulfils all the criteria for EPFL Master’s projects, and gives the student the opportunity to develop their intellectual and technical capabilities. For projects carried out at EPFL, the advising professor must meet with the student mid-semester to verify the progress of the project. For students who are working off-campus, this interview must be done either by phone or by requesting the student to submit a short intermediate report. In case of a problem, the advising professor must inform the section (master-stv@epfl.ch). In this case, in agreement with the section, he or she must find a solution, if possible including a re-orientation of the project in order for it to come to a successful conclusion.

The student must ensure that that the thesis is submitted by the deadline (see Section 4). The EPFL supervisor should monitor the progress of the thesis preparation, advising the student regarding time-management if necessary.

7. MASTERS THESIS

The student is expected to write the master thesis in English, in accordance with the following guidelines and in conformity with the ethics rules concerning plagiarism. This includes:

- the title (see the page at the end of this document)
- the student's contact information (last name, first name, address)
- the name of the EPFL lab, or the university or company in which the Master's project work was done
- the name of the EPFL advising professor or head of the laboratory where the work was done
- a summary (max 2000 characters with spaces)
- an introduction with a brief literature review
- materials and methods used
- results
- a discussion of results, placing the conclusions in the context of other relevant studies, and an statement of future directions for the research.
- relevant literature must be cited correctly.

IMPORTANT: the thesis must represent the work done by the student; if any data from co-workers is presented in the thesis, then it must be clearly identified as such in the text and figure legends. This is obligatory in order to be able to judge the student’s work. All work presented and written in the form of a scientific article, even if the candidate is first author, will be rejected.
8. DATES AND FORMATS FOR THE THESIS

(a) The deadlines are indicated in the academic calendar [http://sac.epfl.ch/academic-calendar](http://sac.epfl.ch/academic-calendar). The thesis must be submitted by 12h00 (Central Europe time zone) on the indicated day. The student must provide the electronic copy (on CD or on an USB key) of the Master thesis to the SSV (master-stv@epfl.ch). The thesis must be signed and dated. Failure to submit by the deadline will be considered as failure of the Master thesis. The electronic version will be archived in the section on a CD. The section will take care of sending it to the EPFL supervisor and to the external expert. In order to allow adequate time for reviewing of the thesis, the date of the defense cannot be fixed during the week (5 working days) after the master thesis has been submitted.

(b) EPFL has strict policies to combat plagiarism. The electronic version of the document will be scanned for plagiarism. Any work found to contain significant plagiarism will be rejected. (For further information, consult the rules on plagiarism in the appendix at the end of this document, which are also available on the web at:

9. THESIS DEFENSE - LOCATION

Together with the student, the supervising EPFL professor fixes the date of the exam and chooses the external expert. This information must be transmitted to sac-pdm@epfl.ch at least one month before the exam. Since it is considered as an official exam session, the oral examination is not public and is, therefore, limited to the student, the expert and the EPFL official advisor. If the professor would like to invite his/her lab, he/she should obtain the written agreement of the student. This document must accompany the evaluation sheet that is sent to the section. In principle, the thesis defense takes place at EPFL. For students on exchange, the oral exam may also be done via video conference or telephone conference call.

10. DEFENSE AND JURY

The oral presentation of the Master project by the student is in English and should last 30 minutes or less. The presentation is followed by an oral examination in English, which lasts at least 30 minutes. The jury is composed of the supervising EPFL professor and an expert from outside EPFL, nominated by the advisor and approved by the Registrar’s office.

Additional people can attend the exam with agreement of the student.

In exceptional cases where the thesis contains confidential data, the thesis supervisor must indicate this to the advising professor from the start of the Master's project. A solution must be found between the advising professor at EPFL and the supervisor/host institution to ensure that the data remain confidential.

EVALUATION: The jury takes into account the following elements (see attached form in appendix):

1- Project management: Did the student manage its/her time efficiently? Were they competent at the bench? Did they keep a comprehensible lab notebook? How much input did the student have into the experimental design? What are the student's problem-solving capabilities?

2- The academic content of the Master project: Is the topic introduced properly? Are the results presented clearly? Are the conclusions valid? Are the results placed properly in the context of other studies?

3- The quality of the written report (presentation of the report, clarity, precision, references, grammatical accuracy and absence of plagiarism);

4- The quality of the oral presentation: was the talk well–structured? Were the slides clear?
11. CONDITIONS FOR PASSING
The Master project is considered passed when the student has submitted the work within the specified deadlines and received a grade of at least 4.0 (6 maximum; 0.5 point increments from 1.0).

12. EXTENSIONS
If the quality of the written thesis is considered inadequate, the EPFL advising professor can request that the student revise it within a six week period (including the oral examination) with the agreement of the section. Modifications may be made to the format, but not the content (data), of the thesis. If aspects of the data presented are considered inadequate, the text must be rewritten to accommodate the expert’s comments.

13. WITHDRAWAL
Once it has started, a Master project cannot be abandoned, except for exceptional reasons, and with agreement with the EPFL advising professor and, during a mobility, the lab supervisor or the head of the company. In all cases the section must be informed.
Withdrawal from a project is considered as failure of the Master thesis. In the case of failing, a new master project can be proposed in another laboratory. A second failure is eliminatory.

14. POSTER PREPARATION (rules)

How to prepare your poster:
Your poster should contain a brief summary of the aim of your study, the methods used and the salient data and conclusions drawn from your master thesis. Figures supporting the methods and results are also required. Clearly, in case of a confidentiality agreement or patentable sensitive data, students are not obliged to present a poster. Please consult your supervisor when preparing the poster. Advice regarding the required format and resolution (format: A0; resolution: minimum 300dpi) can be found at the following link:

a) For the students at EPFL

Poster title: Title of the master thesis
MASTER IN:
School of Life Sciences
Name of the Student
Name of the advisor EPFL Professor.
Laboratory

b) For the students gone on mobility

Poster title: Title of the master thesis
MASTER IN:
Name of the Student
Name of the supervisor of the host laboratory
Name of the host laboratory
Name of the advisory EPFL Professor

The reception of electronic file of your poster should be done by mail or dropbox, latest on September 1st, 2016. The SSV thanks you in advance to respect those delays. For any further information on the poster please contact: master-stv@epfl.ch
Appendix I

Code of ethics for citing information sources

Plagiarism is unanimously considered a major breach of ethics, meriting sanctions on EPFL’s part, possibly legal proceedings. Committing acts of plagiarism is incompatible with the honor code and ethical charter in force at EPFL.

In the educational environment, an author begins work by assembling and reading the results and ideas published by other authors. The quality of his/her work depends on the quality and the variety this gathered information. Today, the increasing proliferation of information underlines the importance of the issues of conscientious use and correct citation of these sources.

In order to guarantee conscientious use of sources of information on the part of EPFL students and staff, the EPFL Direction has enumerated the following rules:

1. Use of information must respect simple but strict ethical guidelines: the respect of intellectual property and truth forbids that one passes for one’s own, even by omission, work that one has not accomplished.

2. Sources must be clearly cited, in such a way that an outside reader can verify for him/herself the quality and origin of the information.

3. In particular, students, researchers and teaching staff must be careful to distinguish between information coming from others and that which is their own:
   a) author citation must be indicated by quotation marks or styles used in the discipline;
   b) Comments that reflect a text or are simple adaptations must be indicated as such (“here, we follow the ideas of X, adapting them to our context”);
   c) personal contributions should be indicated as such and are encouraged;
   d) sections of computer code that are copied, modified or even simply inspired from existing code must be mentioned as such. A comment must accompany the code.

4. The bibliography must be precise and allow a reader to locate the source (books, articles, etc.)

5. It is common courtesy to indicate important non-written information received orally.

6. Scientific information gathered on the internet must be identifiable. Texts, images, computer code and other information copied from a site must be referenced. The current method is to identify the URL and date referenced.

7. The user of an information source must respect its copyright. The use of copyrighted material is subject to precise rules. Copyright rules also extend to the educational domain. Computer code is also copyright protected.

For writing this ethics code, EPFL has used, with specific authorization, the ethics code of the University of Lausanne of June 27, 2005, concerning borrowing, citations and use of various sources, itself inspired by the Ethics Code of the Université catholique du Louvain for students concerning borrowing, citations and use of various sources, of February 9, 1998.
